

Blue Mountain Regulatory Asset Manager

Now Is The Time

It's never been more important for you to drive out costs in your maintenance and calibration programs. In order to reduce costs and budgets while still maintaining quality and compliance, investments need to be made to minimize redundant work and to maximize productivity - investments that will lead to productivity gains, reduced complexity, reduced risk of non compliance and that pay a fast return on investment (ROI). A recent industry report states the number one goal with many company CFO's was to reduce overall operating expenses and specifically to reduce maintenance costs in the coming year. Now is the time to make this happen.

Blue Mountain Quality Resources, Inc. and our Blue Mountain Regulatory Asset Manager® software has enabled many Life Science companies like yours, to make these key investments with proven results and ROI. The combined software functionality, the highly configurable work flows and our proven implementation program have generated solid returns for companies at many levels.

Key to the success of these implementations was the ability to put together a clear, concise business case based on real and tangible areas where the productivity gains and cost savings are derived. The implementation of Blue Mountain Regulatory Asset Manager has proven to:

- Streamline work flows
- Reduce equipment and instrument downtime
- Increase organizational efficiency
- Harmonize procedures and
- Reduce IT costs by consolidation

THE COMPLETE SOLUTION

Our software is only as good as your ability to use it. Every year we are onsite at hundreds of Life Science companies and have developed an industry leading set of services to put the software to work for you, not the other way around. Our implementation services follow a complete life cycle and can be used turnkey or ala carte. We have an excellent track record for on-time and on budget delivery. We can deliver these service at your facility or even remotely, saving you costly travel expenses.

Blue Mountain Regulatory Asset Manager utilizes the latest web based technology for fast and easy deployment locally or around the world and it is developed under a State of the Art Quality System based on GAMP5 – further reducing your risk and streamlining your implementation.

NOW IS THE TIME

Let us help you build your business case and propose a solution that is based on your requirements, budget and what is right for your organization. We realize the far reaching implications of system selection, the hard work it entails and the risks. Now you can take these easy steps to drive your company forward.

Blue Mountain Regulatory Asset Manager SOLUTIONS

Blue Mountain has a solution for every budget whether you are managing calibration and maintenance for a start up medical device or Biotech company or running a world class metrology system for a Fortune 500 Pharmaceutical firm.

FULLY CONFIGURED SOLUTION

To maximize your investment and to receive the fastest payback, a fully configured solution harmonizing your firm's best practices with streamlined automation capabilities is paramount. Fully configured Blue Mountain Regulatory Asset Manager implementations for both GMP calibration and maintenance are proving this capability daily. These implementations have gone head to head with solutions from Infor®, IBM® and SAP® for many firms and proven *there is an alternative* to high cost and IT intensive software.

Depending on the scope and requirements of your firm, our organization can work with you to explore a fully configured implementation at a **FRACTION OF THE COST OF THE COMPETITION.**

BASELINE CONFIGURATION SOLUTION

Developed and refined from the requirements of hundreds of small facilities where the cost of a custom configured application is not an option. The Baseline solution is a preconfigured version of the fully functional Blue Mountain Regulatory Asset Manager platform. Our team of industry subject matter experts designed this system to use the best components of a fully configured system but with a fixed set of industry best practices. Practices based on 20 years in the industry and over 1000 GMP customers. It can be used "out of the box", and implemented with a minimum of

services. Some of our customers are further streamlining the validation of this application by using risk based approaches suggested by EN2500 and GAMP5. Providing you power off the shelf and into your facility - all at a low total cost of ownership.

BEST IN CLASS CALIBRATION SOLUTION

For many firms, with world class metrology programs, our Blue Mountain Regulatory Asset Manager is demonstrating it has what it takes. You may be looking at or being forced to use a CMMS or EAM with limited calibration functionality. We know your position. We talk to companies just like yours every day. Using Blue Mountain Regulatory Asset Manager as a Best-In-Class calibration solution provides you with the best life science calibration functionality available today. Blue Mountain's experience working with over 1000 calibration groups has provided us a unique view into the real requirements that are needed to support a world class metrology program.

Whether it is a paperless calibration system or a system that enables best in class processes like those in NCSL RP6 or ISPE's GAMP guide to calibration practices – Blue Mountain Regulatory Asset Manager has what it takes to get the job done. Blue Mountain also has the experience and tools to integrate with other systems whether it's your LIMS, QMS and/or ERP. We've even integrated our software with IBM Maximo® and SAP PM®.
